

VisConf

Create an animated version of your talk from transcript and slides.

Problem?

So a lot of times, small meetups do not have resources to record a talk and hence the world never gets to see these amazing talks!

Solution

A talk visualizer that generates an animated version of your talk from **transcript** and **slides**.

How?

1. Convert Slides to **PDF** format
2. Upload to CDN (clouddinary or any other) or GitHub
3. Visit **visconf.cc/create** and everything else is just like writing a blog!

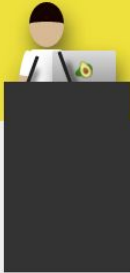

What's new in v0.9?
